Sun Height and Shadows

equator You may have noticed that sunshine seems barely warm just before sunset, when the Sun is low in the sky. At noon the sunshine seems much hotter. The angle of light affects the temperature. When the Sun is high in the sky, sunlight strikes the ground at close to a right angle. The energy of sunlight is concentrated. Shadows are

APPENDIX F - SHADOW FLICKER ANALYSIS

Nov 26, 2018 · Shadow flicker is a term used to describe the intermittent change in the intensity of light cast on an area resulting from the rotation of an operating wind turbine's blades. The calculation considers the percentage of sunshine based on local regional sunshine statistics; the alignment of the blades in relation to the receptor due to wind
