Hierarchical Long-term Video Prediction without Supervision

method is limited because it requires ground truth annotation of high-level structures (eg, human joint landmarks) at training time Our network encodes the input frame, predicts a high-level en-coding into the future, and then a decoder with access to the first frame produces the predicted image from the predicted encoding The decoder

Example finite state machine

How To Design A Finite State Machine Here is an example of a designing a finite state machine, worked out from start to finish Step 1: Describe the machine in words In this example, we'll be designing a controller for an elevator The elevator can be at one of two floors: Ground or First There is one button that controls the elevator, and
